

1:1 Day 5

I was able to print out the example given using Tangle. However, I could not get float the decimal to one decimal point. I had a beginning issue of not being able to print out the numbers. With a ton of tampering and breaking the code, I finally was able to get it somewhat working.

I don't completely understand how to use Tangle, but I do have a better understanding of it now. I wasn't able to get through the whole sprint because I couldn't float the decimal and spent most of the time trying the code.

With the algorithm, I couldn't get the string to print out properly or print out in a number. Whenever I got stuck I would Google similar problems to see if I can try and implement some of the things.
